Summary

Version 2.4 received another almost complete rewrite focussing on the internal structure of the package, and some minor fixes (see the CHANGELOG for more details). The package now ships with a new dummy text, in pseudo Czech, provided by Ondrej Mocek. To select this text, load the package with `\usepackage[textulipsum-cipsum]` or use `isetipsumtext-lipsum-cipsum`. The dummy texts now have a language metadata which is used to select the proper hyphenation patterns to the dummy text. For compatibility with old documents you can load lipsum with `lusepackage[auto-lang-false]` ipsum or, as above. use `setipsum[auto-long-false]`

Competencies

- Problem Solving
- Strategic Planning
- Career Goals
- Attention To Detail
- Decisiveness

Work Experience

Java Developer - 31/12/2021 to 20/1/2022
Oms, Pune
